

**AMENDMENTS TO THE SPECIFICATION**

Please amend the paragraph beginning on line 20 of page 9 as follows:

Fig. 1 a schematic cross-section through a built-in lamp in accordance with the invention;  
and

Please add the following new paragraph on line 22 of page 9:

Fig. 2 is a view similar to Fig. 1, but illustrating a modification thereof; and

Please amend the paragraph beginning on line 23 of page 9 as follows:

Fig. ~~[[2]]~~ 3 a plan view of a built-in lamp in accordance with the invention in accordance with a further embodiment.

Please amend the paragraph beginning on line 26 of page 9 as follows:

Fig. 1 and Fig. 2 both show ~~shows~~ a schematic cross-section through a built-in lamp in accordance with the invention.

Please amend the paragraph beginning on line 5 of page 10 as follows:

A direct light reflector 4 (Fig. 1) or reflector 16 (Fig. 2) is attached inside the housing 10 and has a first, circular opening in the direction of illumination which coincides with a direct light discharge region 1 (Fig. 1) or direct discharge region 18 (Fig. 2). The direct light reflector 4 forms the second reflector region described above in the sense of the invention. At its end remote from the direct light discharge region 1, the direct light reflector 4 has a further likewise substantially circular opening which faces the base of the housing 10 and from which some of

the light amount radiated from the bulb 6 can be discharged from the direct light reflector 4 opposite the direction of illumination in the direction of the housing 10. The direct light reflector 4 has a shape which tapers in the direction of the base of the housing 10 and which, in a possible embodiment, has a cut-out 14 (Fig. 1) or cut-out 14' (Fig. 2) at its end remote from the direct light discharge region 1 in order to provide space for the fitting of the bulb 6.

Please add the following new paragraph on line 18 of page 10:

As shown in Fig. 2, the first reflector 16 adjoins the second reflector 15 as shown in phantom line while a portion 17 of the first reflector 16 is spaced from the second reflector 15.

Please amend the paragraph beginning on line 5 of page 13 as follows:

Fig. ~~[[2]]~~ 3 shows a built-in lamp in accordance with the invention in a plan view which has a direct light discharge region 1' and a diffuse light discharge region 2' surrounding it (analog to Fig. 1). The direct light discharge region 1' is bounded at its outer periphery by a circular line 19 which at the same time represents the inner boundary of the diffuse light discharge region 2'.

Please amend the paragraph beginning on line 23 of page 13 as follows:

An additional reflector ~~[[7'']]~~ 7' is provided behind the direct light reflector extending into the plane of the drawing and extends in a plane parallel to the plane of the drawing. The relative arrangement of the direct light reflector, the bulb 6 and the additional reflector 7' is similar to the representation in accordance with Fig. 1.
